

New Injury & Treatment tracking Upgrades have been released!

Objective of the new upgrades:

1. Allow Athletic Trainers the ability to tie treatments to injuries
2. Create a standard platform for documenting injuries and treatments (NATA standards along with the Andrew's Institute)
3. Increase the speed for entering injuries and treatments from both the mobile app and the website
4. Meet and exceed HIPAA and FERPA guidelines
5. Enhance research and reporting for districts regarding health and safety standards

Overview of each objective:

Objective 1

All injuries must be documented. Once an injury has been documented, the athletic trainer will be able to tie all treatments to a specific injury. (See tutorial on documenting Injuries). The injury document page has been standardized and adjusted to ensure easier and faster entry. The injury can be entered from the website as well as the mobile app. There are only seven required fields on the new injury page; the other fields are optional for those that would like to document more information. Once an injury has been entered all treatments related to that injury can be connected. ****You must enter an injury in order to tie treatments.**** A new category has been added as well—Prevention/Documentation. Prevention can be documented for those students without an injury. (See Prevention tutorial)

Objective 2

The new injury and treatment documentation pages have been updated to provide standardized documentation per the NATA and Andrew's Institute. The injury page allows for more extensive documentation based on the nature of the injury. (See entering an Injury tutorial for more explanation) This will allow Rank One Sport the ability to provide better reporting for the district and statewide athletic organizations.

Objective 3

Entering Injury and Treatment information has been streamlined. The data fields that are required can be entered in just minutes. Information is consistent from both the app and the website. The new documentation fields and updated pages continue to provide communication tools between the athletic trainer and the administration / coaches. (See Injury and treatment documentation tutorials)

Objective 4

All injury and treatment information will be sent via the new push notifications (App) and the secure website messaging feature. (See new message feature inside the website on the dashboard page –tutorials are available) The new messaging features meet and exceed HIPAA and FERPA guidelines. All messages sent by coaches to rosters and parents will be documented inside the software. We will be removing the Text Messaging feature, as texting does not meet all required HIPAA/FERPA guidelines.

Objective 5

The new injury and treatment documentation pages will allow Rank One Sport to provide your district with better information. The data will be more consistent and allow research across multiple platforms. The data can be used in multiple ways to improve the athletic department safety and prevention programs.
